Proficiency

# HARSH THAKUR

## PERSONAL PROFILE

As a **Software Engineer** and an avid coder, I have created features that have consistently resulted in bug-free product delivery. Working with the team, taking part in code reviews, and assisting in the resolution of challenging issues.

I have always gone out of my comfort zone to get a job done, pressure has always been an integral part of my journey as I constantly update my tech stack and keep up with new technologies.

## WORK EXPERIENCE

**MAD Street Den** | Jan 2022 - Current

Junior Software Engineer (Apr 2023 - Current)

Engineering Trainee (Jun 2022 - Mar - 2023)

Engineering Intern (Jan 2022 - May 2022)

- In the course of developing multiple React applications, I have used hooks, redux, axios, and numerous other frontend technologies. Building new features for user interactions, such as table/bulk view, image cropping and selection on canvas, and component transitions, are some of the most recent and best works I have done in my current position. Handling API data and rendering it on the UI with proper design is the most important part of FE. With this in mind, I also focused on bug fixes and platform optimisation for the best user experience in my projects.

**Chattel Technologies** | Mar 2021 - Apr 2021

Full Stack Developer - Intern

- Full stack development for various projects of the company also contributed to the improvement of the company's software development process.

**Delicon Consulting Services** | Jun 2020 - Jul 2020

Full Stack Developer - Intern

- Full stack development of an online B2B and B2C MERN stack app.

## EDUCATIONAL HISTORY
